TITLE: CONTROL STRUCTURE FASTENED WITH THE HOUSING OF AN ELECTRONIC
DEVICE FOR REGULATING A COOLER OF THE ELECTRONIC DEVICE

Preliminary Amendment: CLAIM AMENDMENTS

1. (Currently amended) A control structure of a cooling device contained in a housing of ~~the~~
an electronic machine or the like, said control structure being fastened to a vent of the housing and
comprising:

a control member fastened to an inner end of the vent of the housing without
obstructing the vent, said control member ~~provided with~~ being comprised of a regulating end
whereby said regulating end is connected to the cooling device for regulating ~~the~~ operation of the
cooling device; and

an adjustment member fastened pivotally to an outer end of the vent of the housing
without obstructing the vent such that said adjustment member is connected to said regulating end
of said control member, and such that said adjustment member can be turned to actuate said
regulating end of said control member.

2. (Currently amended) The control structure as defined in claim 1, wherein said control
member and said adjustment member are ~~provided with~~ comprised of a plurality of hollow portions
in communication with the vent of the housing.

3. (Currently amended) The control structure as defined in claim 1, wherein said adjustment member is ~~provided with~~ comprised of a protective screen.
